

Module 1: Frontend UI Setup & Authentication Screens

Frontend:

- Set up React + Tailwind project structure.
 - Build UI for registration/login, OAuth buttons, and profile pages.
 - Use mock JSON/local state for now (no real backend).
-

Module 2: Property Listing Management

Frontend:

- Create pages/forms for owners to add/edit/delete property listings.
 - Property card components with image galleries & details.
 - Mock listing data stored locally (JSON file or static array).
-

Module 3: Search & Property Discovery

Frontend:

- Build search bar, filters (price, amenities, gender, etc.).
 - Display results dynamically from mock dataset.
 - Property detail page with dummy reviews.
-

Module 4: Booking & Communication

Frontend:

- Booking request button on property detail page.
 - UI for booking history (Pending, Accepted, etc.).
 - Messaging/chat interface with mock conversations.
-

Module 5: Reviews & Ratings

Frontend:

- UI for tenants to submit review/rating.
- Display reviews on property detail page (dummy data initially).
